The Events Log provides an real-time, chronological log of all Monitored Systems' USB Mass Storage Device Use Activity. The Log displayed here shows the NetworksAOK's Real Time Events Log when Events are sent from the Individual Monitored Systems using HTTP, HTTPS, or SMTP. The Individual Monitored Systems can also be setup to send SNMP Traps to other Monitoring Systems, such as HP OpenView, however the Log will be displayed as those products are designed.

The Acknowledge Column in this Log initially appears as a 'Ack' button and changes to text when selected, indicating when and who acknowledged the event.
